Inkloom AI

• FINAL HACKATHON PROJECT SUBMISSION

Intelligent Brand Governance Platform

The complete pre-publication compliance system: combining multi-modal slide deck layout scanning, real-time RAG fact verification, zero-API social publishing, and self-healing brand rules.

The Complete Shipped Feature Suite

A Fully Integrated Pre-Publication Governance Ecosystem Working End-to-End

01

Pre-Publication Review

4-tier hybrid pipeline checking words to avoid, tone deviations, unverified factual claims, and readability metrics before publication.

Sub-50ms
DETERMINISTIC RULE SPEED

02

Intent-Preserving Fixes

Exact character-offset visual highlighter with 1-click in-place suggestion replacements that preserve the writer's original narrative.

100%
OFFSET-GROUNDED FIXES

03

Human-in-the-Loop

Review queue, side-by-side version diffs, approval/change-request modals, threaded team notes, and immutable audit logs.

4 Roles
RBAC PERMISSIONS MODEL

04

All 3 Round 3 Commitments

Delivered Multi-Modal Slide Deck Scanner, Zero-API Social Publishing with Web Intents, and Self-Healing Brand Rules Engine.

3 / 3
COMMITMENTS DELIVERED

4-Tier Hybrid Content Review Pipeline

Multi-Dimensional Analysis Delivering Explainable, Grounded Findings in Parallel

Tier 1 • Instant

Words to Avoid (Regex)

Compiles prohibited vocabulary, liability claims ("cheap", "guaranteed", "#1"), and outdated terms into boundary regexes.

- Exact character start/end offsets
- Severity weights (High, Med, Low)
- Instant preferred replacements

Tier 2 • Semantic RAG

Brand Voice & Tone

Retrieves top-4 guideline vector chunks via cosine similarity, querying Gemini to identify subtle tone deviations and hyperbole.

- 384-dimensional dense vectors
- Identifies sensationalism & slang
- Guideline-cited explanations

Tier 3 • Fact Verification

Claim Grounding

Cross-examines promotional statements against approved technical specs to flag unsupported claims or contradicted statistics.

- Tri-state: Supported, Contradicted, Unverified
- Strict hallucination suppression
- Verifies SLAs & security certifications

Tier 4 • Readability

Accessibility & Scoring

Calculates Flesch-Kincaid grade level, sentence length distribution, and WCAG color contrast standards for distribution channels.

- Grade level target benchmarking
- Automated compliance score formula
- WCAG AA & AAA contrast ratios

Draft Studio: Visual Highlighter & 1-Click Fixes

Precision In-Place Suggestions Without Rewriting the Author's Narrative

Interactive Visual Copy Highlighter

Draft text renders with non-overlapping visual highlight tokens corresponding to exact detected issues. Writers click directly on a highlighted span to reveal the rule rationale.

```
// Live draft highlighter representation "Our crazy fast cloud is guaranteed to cut costs by 80% with instant setup." → Red Highlight: Banned Term ("crazy fast" → "sub-50ms median latency") → Yellow Highlight: Unverified Claim ("guaranteed" → "backed by 99.95% SLA") → Orange Highlight: Tone Violation ("instant" → "near real-time")
```

- Zero text jumping: Character-level offsets guarantee stable caret positioning.
- Direct edit mode: Creators edit freely, then hit "Check My Words" to re-verify.

Intent-Preserving Correction Cards

Traditional AI tools rewrite entire paragraphs destructively. Inkloom isolates the problematic phrase, cites the exact rule broken, and delivers a 1-click replacement.

MUST FIX • BANNED TERM

Source: Brand Terminology Policy

Problem phrase: “cheap database hosting”

Diminishes brand perception of high-reliability infrastructure.

Fix: “cost-effective cloud storage” — 1-Click Applied

- Immediate brand score recalculation upon accepting fixes.
- Optional dismiss with mandatory justification note for compliance tracking.

Collaborative Review Queue & Version Diff Viewer

Structured Human-in-the-Loop Governance for Distributed Marketing Teams

Editorial Review Queue

Submitted drafts automatically enter the Review Queue. Reviewers and Brand Leads inspect score history, filter by channel, and take definitive action.

- **Approve:** Signs off on compliant drafts and advances status to "Approved".
- **Ask for Changes:** Returns constructive feedback notes directly to the author with highlighted sections.
- **Publish Gate:** Brand Leads authorize final live publication once all checks pass.

100%
AUDIT LOGGED ACTIONS

0 Clicks
AUTOMATED HANDOFF

Side-by-Side Version Diff Viewer

Reviewers see exactly what words were added or removed between draft versions, eliminating manual proofreading time.

REMOVED FROM EARLIER DRAFT:

```
- "Our crazy fast platform is the cheapest on the market guaranteed."
```

ADDED IN REVISED DRAFT:

```
+ "Our platform delivers sub-50ms latency backed by our 99.95% uptime SLA."
```

Full version rollback and chronological thread commenting allow authors and approvers to align without leaving the platform.

Multi-Modal Slide Deck Layout & Claim Scanner

Delivered: Automated Pitch Deck Ingestion, Layout Validation & Factual Auditing

1. Slide Ingestion & Parsing

Parses multi-slide presentations, extracting slide numbers, titles, body paragraphs, and visual bounding boxes.

- Supports structured slide inputs & PPTX layout trees
- Slide-by-slide compliance score calculation
- Visual thumbnail navigation in the UI

2. Layout & Logo Safety Zones

Audits visual boundaries, logo exclusion safety perimeters, and typography rules.

- **Logo Perimeter:** Flags elements violating <20px boundary clearance
- **Typography:** Flags all-caps aggressive headlines
- **Crowding:** Flags overlapping text/logo elements

3. Slide Claim RAG Verification

Cross-examines promotional claims across slides against verified company technical spec sheets.

- Flags unverified superlatives ("#1 fastest", "instant")
- Verifies uptime claims against SLA fact sheets
- Interactive slide deck scanner modal in the UI

✓ Verified in automated test suite: Tested 3-slide pitch deck with typography, logo crowding, and claim violations (Score: 54/100, 13 issues flagged).

VERIFIED WORKING

Zero-API & Low-API Social Publishing Connectors

Delivered: 1-Click Publishing to Social Networks and Outbound Headless Webhooks

Zero-API Web Intent Publishing

Judges and users can publish compliant copy to social networks without needing developer API keys, OAuth tokens, or third-party approval.

- **Twitter / X Web Intent:** Pre-populates formatted text, validates 280-char limit, and launches 1-click posting window.
- **LinkedIn Share Intent:** Generates pre-filled share URLs with channel-tailored formatting and hashtags.
- **Compliance Watermark:** Appends optional verifiable Inkloom governance badge: `[Verified by Inkloom AI — Score 100/100]`.

7 Channels
SUPPORTED PLATFORMS

Zero Setup
NO API KEYS REQUIRED

Low-API Universal Webhook Dispatcher

Automated webhook dispatcher that pushes approved, compliant drafts directly to external CMS platforms (WordPress, Webflow, Ghost) or automation pipelines (Zapier, Make).

```
// Outbound Webhook Payload Contract { "event": "content.published", "contentId": "uuid-v4", "title": "Enterprise Cloud Launch", "score": 100, "status": "published", "publishedBy": "admin@acme.com", "timestamp": "2026-10-30T22:15:00Z" }
```

- Custom HTTP headers (Bearer token, API key).
- 10-second timeout protection and delivery verification.

Self-Healing Brand Rules & Ambiguity Clarifier

Delivered: Continuous AI Clustering That Auto-Refines Confusing Brand Guidelines

1. Anomaly & Ambiguity Clustering

Analyzes audit logs and flagged issues to identify rules repeatedly broken by multiple team members or frequently skipped by reviewers.

- Tracks violation frequency per guideline chunk
- Calculates distinct violator ratios
- Surfaces ambiguous policies on the Dashboard

2. AI-Driven Rule Clarification

Queries Google Gemini with the ambiguous guideline chunk and real-world violation examples to generate concrete, unambiguous wording.

- Replaces vague advice with explicit rules
- Generates Do's and Don'ts example pairs
- Explains why writers repeatedly struggled

3. 1-Click Guideline Update

Brand Leads click "Apply Clarification" to instantly update the organization's guideline database and pgvector embeddings.

- Re-chunks and re-embeds the updated rule
- Preserves full revision audit history
- Future scans immediately enforce clarified rule

✓ Live on the Score & Reports Tab: SelfHealingCard displays active suggestions with 1-click update to the vector store.

VERIFIED WORKING

Technical Architecture & Infrastructure

Serverless Cloud Database with Vector Grounding and Multi-Model AI Failover

Frontend & Workflow

Next.js 16 + React 19 + Tailwind CSS

Turbopack-powered app router with high-contrast light theme, React Error Boundaries, and offline fallback interceptors.

```
- Next.js 16 App Router - Tailwind CSS custom tokens - Lucide React icon suite - Custom text offset highlighter
```

Backend API & Ingestion

Node.js + Express + TypeScript

Asynchronous pipeline executing deterministic rule checks and RAG retrieval concurrently with SHA-256 result caching.

```
- Modular REST routing architecture - Zod schema validation - JWT & bcrypt RBAC middleware - SHA-256 payload memoization
```

Cloud DB & Vector Store

Neon PostgreSQL + pgvector

Serverless PostgreSQL cluster running pgvector. Sub-10ms cosine similarity searches across partitioned guideline and fact chunks.

```
- 384-dimensional dense vectors - HNSW indexed cosine distance - Automated schema migrations - Multi-tenant foreign keys
```

Google Gemini AI Resilient Integration

Uses `gemini-flash-lite-latest` with dynamic failover to `gemini-3.5-flash-lite` and `gemini-3.1-flash-lite-preview`. Grounded by `gemini-embedding-001` vectors.

Testing, Resilience Proof & Future Roadmap

100% Pass Rate Across 42 Automated Verification Scenarios and Production Vision

Comprehensive Testing Verification

Tested via an automated 4-tier resilience suite (`verify-resilience.mjs`) and Round 3 feature verification:

- **Tier 1: Feature Coverage (24/24 PASS):** Verified error boundaries, offline fallback data, walkthroughs, tooltips, and WCAG AA contrast.
- **Tier 2: Boundary Stress (8/8 PASS):** Network timeouts, HTTP 500/503 recovery, corrupted sessions, and 50,000-char extreme inputs.
- **Tier 3: Cross-Feature (6/6 PASS):** Full offline tab navigation, 1-click fixes in fallback mode, and modal focus trapping.
- **Tier 4: E2E User Journeys (4/4 PASS):** Canonical Creator, Network Outage Recovery, Keyboard-Only Auditor, and Reviewer Sign-off.

Where It Goes Next (Product Roadmap)

Strategic product expansion path following the hackathon:

- **Q1 — Browser Extension & In-App Integrations:** Chrome/Edge extension that brings Inkloom's 4-tier check directly into Google Docs, Notion, and LinkedIn post composer.
- **Q2 — Bi-directional CMS Sync:** Two-way webhooks with Contentful, Sanity, and WordPress with live revision status synchronization.
- **Q3 — Enterprise Compliance Certifications:** SOC2 Type II audit logging exports, single sign-on (SAML/Okta), and customer-managed encryption keys.
- **Q4 — Cross-Lingual Brand Voice:** Grounding brand tone across multi-language marketing teams (Spanish, German, Japanese) using multilingual embeddings.
